Symbol 引用

这是一种全新的使用方式，应该说这才是未来的主流，也是平台目前推荐的用法。相关介绍可以参考这篇文章() 这种用法其实是做了一个 SVG 的集合，与另外两种相比具有如下特点：

- 支持多色图标了，不再受单色限制。
- 通过一些技巧，支持像字体那样，通过 `font-size`，`color` 来调整样式。
- 兼容性较差，支持 IE9+，及现代浏览器。
- 浏览器渲染 SVG 的性能一般，还不如 png。

使用步骤如下：

第一步：引入项目下面生成的 symbol 代码：

```
<script src="./iconfont.js"></script>
```

第二步：加入通用 CSS 代码（引入一次就行）：

```
<style>
.icon {
  width: 1em;
  height: 1em;
  vertical-align: -0.15em;
  fill: currentColor;
  overflow: hidden;
}
</style>
```

第三步：挑选相应图标并获取类名，应用于页面：

```
<svg class="icon" aria-hidden="true">
  <use xlink:href="#icon-xxx"></use>
</svg>
```
